## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 6-9 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Smalley.

The reference teaches a composition of matter comprising fibers of carbon nanotubes and a matrix. The examiner is unable to be ascertain certain features of the composite and processes for its manufacture. The reference fails to teach the claimed weight percentages, the claimed anisotropically positioned fibers, the claimed matrixes, and the claimed method of manufacture. The reference does teach that the carbon nanotubes are uniformly mixed. (col. 39, lines 43-44) Moreover, the reference teaches that the composite can be made from conventional techniques. (col. 39, lines 33-34) In addition, the reference teaches numerous applications for the composites including those of conventional carbon fiber composites. The examiner takes official notice and it seems reasonable to conclude that the weight percentages claimed are inherent in the composites of column 40, lines 53-67. In the alternative it would have been obvious for one skilled in the art at the time to have modified the teachings of the primary reference as motivated by the need to make a competitive product. Moreover, the examiner takes

official notice and it seems reasonable to conclude that the matrixes are those commonly used in the composites of column 40, lines 53-67. In the alternative it would have been obvious for one skilled in the art at the time to have modified the teachings of the primary reference as motivated by the need to make a competitive product.

Moreover, the examiner takes official notice and it seems reasonable to conclude that the claimed processes are well known techniques of manufacturing composites.

3. Claims 1-5 are rejected under the judicially created doctrine of double patenting over claims 1-15 of U. S. Patent No. **6299812** since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: methods of manufacturing carbon nanotube composites.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
